The Development of Lebanese Zajal: Genre, Meter, and Verbal Duel

Adnan Haydar

Few oral poetic traditions have attained the sophistication, formal virtuosity and popularity of Lebanese zajal poetry, and fewer traditions have cultivated the art of poetic dueling into a national pastime as the zajal poets have done. Even today in war-torn Lebanon more than twenty groups of itinerant poets stage regular contests in various parts of the country and attract thousands of zajal aficionados. Despite the presence of many contending political ideologies and religious affiliations, these poets, who span the political and religious strata of Lebanese society, have remained largely impervious to factional strife and political wrangling. Within the medium of verbal dueling, radical statements, political dissent, and social criticism are sanctioned, encouraged, and held up as models for corrective social and political measures. The general sentiment seems to be that anything is fair in the medium of art.

Perhaps one important reason for the continued popularity of Lebanese and other Arab traditions is the diglossic nature of the Arabic language itself. The fact that people in the Arab world use the dialect in most daily routines and reserve the fuṣḥā for more formal communications, has, in my opinion, had an important effect on the development of vernacular poetry in the Arab world. As to why the Lebanese poets in particular were able to attain such richness and

---

1 For a thorough definition of Lebanese zajal poetry, see below.
2 See, for example, Sowayan 1985 for an account of oral poetry among the Bedouins of Saudi Arabia.
3 “Vernacular” is used here to designate colloquial language as it is spoken today in the various Arab countries. Vernacular Lebanese shares many characteristics with the dialects spoken in Syria, Jordan, and Palestine.
sophistication in their compositions, it is most likely due to the fact that Lebanese literary critics have attached less of a paradigmatic value to compositions in *fuṣḥā* than have other Arab critics. Many Lebanese *fuṣḥā* poets have tried their hands at *zajal* and several have relinquished *fuṣḥā* altogether in favor of *zajal*.

Indeed, since the late nineteenth and early twentieth century the general critical atmosphere has favored serious considerations of literary compositions in the vernacular. Western critics such as Jean Lecerf led the way by highlighting the importance of dialectal studies, and Lebanese critics began to take stock of *zajal* poetics. Today in Lebanon oral poetry has become an important source for M.A. theses, doctoral dissertations, and comparative studies. The early impressionistic and descriptive accounts of *zajal* have recently given way to analytical studies, though methodological problems at times confound the picture and give rise to untenable conclusions.5

In what follows, I shall define some of the critical terms to be used in this study, offer an account of the existing scholarship on *zajal*, and comment on its genres and metrical features. Then I shall discuss the origins of the verbal duel, analyze some of the rhetorical strategies used by duelers, and assess the role of improvisation and audience participation. Throughout, I shall relate Lebanese *zajal* to other Arab *zajal* traditions, both ancient and modern.

In its Hispano-Arabic context the term *zajal* describes a strophic form entirely in the vernacular idiom, which bears a close structural relationship to that of the *muwashshahah*.6 In the Lebanese tradition it means primarily oral vernacular poetry in general, a discourse in many forms, composed in or for performance, declaimed or sung to the accompaniment of music. It is also used to characterize a written tradition which attains high literary value and high formal virtuosity in the compositions of famous Lebanese poets writing either exclusively in the vernacular or in both the vernacular and the literary *fuṣḥā*. Critics have only recently begun to assess the influence of *zajal* poetics on major modern Lebanese poets and consequently on the form and content of

---

4 *Fuṣḥā* refers both to classical Arabic and modern standard Arabic.

5 Much of the problem had to do with the critics’ lack of discrimination between oral and written poetry. The implications of orality are hardly taken into consideration and analyses of poetic meter rarely account for the important roles of stress and musical meter.

6 The *muwashshahah* (pl. *muwashshahät*) is a strophic poem attributed to al-Andalus (Arab Spain) consisting of several divisions with particular rhyme schemes that differ from author to author and ending with a *kharja*, a concluding *bayt* (or verse), mostly in colloquial diction, often expressing a love theme.
modern Lebanese and Arabic poetry in *fuṣḥā*. The development of *zajal* points clearly to song and music. The verb *zajala* means “to raise the voice in singing, to produce a sweet pleasing melody” (Manẓūr n.d.:II, 13). As a genre of poetry *zajal* is closely associated with *ma'annā* (or *ma'annā*), a term predating *zajal* but often used interchangeably with it to designate vernacular Lebanese poetry (*al-shīr al-ʿammī, al-shīr al-sha'bī, al-shīr al-qawmī*, or *al-Lubnānī*) in its entirety. Anīs Frayḥah derives *ma'annā* from the Syriac root ʿanīnā, which means “to sing,” the term itself being a passive participial form of the root. Others disagree with Frayḥah’s etymology, though they still relate the term to Syriac origin despite the fact that its derivation from the second form of the Arabic verb ʿanīnā is quite legitimate linguistically. At any rate, the Syriac derivation associates the term *ma'annā* with singing, while the Arabic emphasizes the semantic meaning of ʿannā: to cause to be emaciated as a result of love. This, in the opinion of Amīn Nakhleh (1945:39), for example, accounts for the preponderance of love themes in early manifestations of Lebanese vernacular poetry. Whatever the case, during the past fifty years *zajal* has replaced *ma'annā* as the term for this poetry. *Ma'annā* has reverted to the designation of a particular subgenre and a particular meter (Nakhleh 1945:37-39) used extensively, though not exclusively, in verbal duels, while *zajal* seems to have acquired, at least until the late 1940’s in the little-known but numerous compositions of Lebanese immigrants in the United States, the name of a specific meter that differentiated it from *ma'annā* and other meters.

The poet of *zajal* is called *zajjāl, qawwāl*, or *shācir zajal*. While the three terms are often used interchangeably, there are clear and basic

---

7 For a good account of the use of vernacular diction in modern Arabic poetry, see al-Jayyūšī 1977:II, 663-65 and 671-72.
8 See Whaybeh 1952:63, where the author quotes from a letter sent to him by Frayḥah. Also see Frayḥah 1947:173 and 1957:273. Note that ʿanīnā derives from the proto-Semitic ghanāya, “to sing.”
9 “The term *ma'annā* is derived from the Syriac word *ma'antshā* (or song)” (Whaybeh 1952:63, where he quotes from a letter dated December 28, 1950, sent to him by ʿĪsā Iskandar al-Ma'ālūf). Syriac experts see this etymology as unlikely, and instead argue for the possible derivation of *ma'annā* from the Syriac word *ma'nthā*, meaning chant or antiphon. See Brockelmann 1928:533.
11 See, for example, Kfarkaddī 1942:II, 71,105,115,121 et seq.
differences among their meanings. Zajjal is strictly speaking a composer of zajal who may or may not be capable of improvisation or extemporization, and who may or may not attain in his compositions a level of literary excellence to merit the name of a shār (or poet). Like the qawwal, the zajjal’s main function is isābat al-ma‘nā, a phrase best translated as “doing justice to the meaning” or “treating a subject in the most efficient way possible in order to convey an intended message.” The emphasis in the word qawwal is on qawl, i.e., “uttering, declaiming, or singing,” on improvisation or extemporization in particular social functions. The qawwal is also referred to as ibn al-kār (“man of the trade”), ibn al-fann (“master of the art”), or ibn al-dhakā (“bel-esprit”),\(^{12}\) all of which are clearly value-laden terms. Mostly uneducated, though in many cases literate, the qawwals are highly respected by the people of their villages and towns and are sought out to recite zajals on religious holidays, political celebrations, births, christenings, marriages, and funerals. Those whose fame reaches beyond their immediate region are called upon to duel other qawwals or suffer loss of prestige among their critical public.\(^{13}\) The term shār zajal is principally reserved for the written vernacular which in the hands of poets such as Michel Ṭrād, William Sa‘b, and As‘ad Sāb has preserved this predominantly oral tradition in literary masterpieces. Shār is not, however, exclusively the provenance of the written vernacular, for the better qawwals and zajjals have, while observing their main function of isābat al-ma‘nā, produced highly sophisticated poetry.

The most quoted account of zajal poetry is Nakhleh’s introduction to Ma‘annā Rashīd Nakhleh (1945) Both Amīn and his father Rashīd were accomplished fuṣḥā poets, the latter having totally abandoned fuṣḥā poetry in favor of zajal and earned himself the title of “Prince of Ma‘annā,” Amīr al-Ma‘annā, for the many zajal forms that he invented. This introduction makes it clear that the history of the various Arabic zajal traditions is fragmentary, usually consisting of classifications based on subject matter and form. Nowhere in the previous scholarship he cites an attempt made to attribute to poetic meter or poetic structure a semantic value or a role in the classifications. An account of some of these is in order here.

Al-Muhibbī (1873:1, 108), for example, divides vernacular poetry into five aqṣām (parts or divisions), one of which is termed zajal because it treats of ghazal (love poetry), uses flower and wine imagery, and dwells on personal emotions. The other four are baltiq, which employs jests and licentious topics; hamāq, which uses satire and jokes; muzaylij, which

\(^{13}\) On the prestige accorded to the qawwals and the critical audience involved in verbal duels, see Lecerf 1932:219-20 and Frayḥah 1957:274-77.
mixes \textit{fuşhā} with colloquialism; and \textit{mukaffir}, which contains aphorisms and sermons (\textit{idem}). Clearly, the classification here depends totally on content. Al-Ibshīhī (n.d.:II, 267 et seq.), on the other hand, lists seven \textit{funūn} (genres; constituent arts?): \textit{al-shīr al-qarīḍ} (\textit{fuşhā} poetry), \textit{al-muwashshah}, \textit{al-dūbayt},¹⁴ \textit{al-zajal}, \textit{al-mawāliyyāt},¹⁵ \textit{al-kān wa kān},¹⁶ and \textit{al-qūmā},¹⁷ the last four of which are in the vernacular idiom. In addition, he recognizes \textit{al-haramāq} and \textit{al-mūštjān} which he does not define. Whether these vernacular genres are characterized by particular metrical configurations or are differentiated according to form and content is not made clear. In a similar vein, Ṣafīyy al-Dīn al-Ḥillī (n.d.:5) speaks of four \textit{funūn} without much elaboration. Only Ibn Khaldūn (1958:III, 460) views \textit{zajal} as a method of composition which, according to him, predates the \textit{muwashshah} and uses the vernacular in all the fifteen Khalilian meters. Though admitting that these vernacular genres have specific \textit{awzān} (metrical forms), most of the critics are content to leave it at that or specify that most of these \textit{awzān} are different from those used by the Arabs in \textit{fuşhā} poetry. Even those who see a close relationship between vernacular and \textit{fuşhā} meters merely gloss over the fact or avoid close analysis.

The situation is not much different with Amin Nakhleh. Despite his thoroughness, he too avoids metrical analysis and involves the reader in a terminological jungle erasing the distinction between \textit{zajal} structures and \textit{zajal} meters. According to him, Lebanese \textit{zajal}, “one of the many extant old \textit{zajal} traditions,” \textit{fa`un min tilka al-ṭarā`i`q al-qadīma}, is none other than Lebanese \textit{ma`annā} (1945:44). Having said that, he divides \textit{ma`annā} into four \textit{anwār} (kinds, genres?): \textit{al-maṭlac} (lit., the opening), also called \textit{al-ma`anāl-cādī} (the usual \textit{ma`annā}); \textit{al-badālī} (the alternate one) which differs from \textit{al-maṭlac} in meter; \textit{al-muwashshah}, which again differs in meter from \textit{al-maṭla`c}, and \textit{al-qasīd} (the ode?), which employs either the

---

¹⁴ \textit{Al-Dūbayt} consists of two verses (four hemistichs) with the rhyme scheme aaba. See al-Ibshīhī n.d.:II, 261.

¹⁵ For an etymology of \textit{mawāliyyā} (pl. \textit{mawāliyyāt}) see Cachia 1977.

¹⁶ See al-Ibshīhī n.d. for examples of this genre. Also see al-Muḥibbī 1873:I, 108-110. The name \textit{Al-kān wa kān} suggests that the content of poems in this genre relate an anecdote, or give a sermon. In other words, a \textit{kān wa kān} poem relates what was (or \textit{mā kān}). See Whaybeh 1952:61.

¹⁷ It is said that \textit{al-qūmā} derived its name from the call of Baghdādī singers: “Qūmā lī nasḥur qūmā.” (“Rise and let us have a light meal before daybreak”). The reference is to \textit{al-sāḥīr} (the light meal before daybreak) during the fasting month of Ramaḍān. See al-Muḥibbī 1873:I, 108.
wāfir meter of al-Khalīl (presumably without modification), or the meter of al-maṭla‘, or that of al-badālī. What the meters of al-maṭla‘ and al-badālī are, we are not told. Nakhleh instead devotes his effort to the various rhyme patterns in which each of the four anwār appears in the written traditions, especially in the dīwān of Rashīd Nakhleh, who is credited with the invention of most of these patterns (see, for example, ibid.:45-51). Only one meter, al-wāfir, is spelled out and that with a specific reference to al-badālī from Macann Rashīd Nakhleh.

Al-zajal, he continues, consists of six funūn: al-muhmal (which is totally without diacritical marks), al-marsūd (in which the first hemistich starts with a particular obligatory letter), al-mujazzam (where every line in the successive stanzas rhymes with the others, except for the last line whose rhyme is a rujūc or “return” to the rhyme of the opening line or lines), and, finally, al-alifiyyat (in which the first letter of every line follows the order of the Arabic alphabet; see Whaybeh 1952:72).

In this context, the word funūn means something totally different from genre as al-Ibshīhī’s usage indicates. It describes, rather, a written style characterized by badi‘ (figurative language), formal idiosyncrasies, and verbal virtuosity.

Nakhleh then identifies several methods, ‘iddat ṭarā‘iq (1945:52). The first one of these is al-qarrādī18 (also pronounced al-qirrādī), which in turn subsumes a number of funūn such as karj-ḥajal (the gait of partridge), mashy al-sitt (the gait of ladies), daqq al-mitraqah (the pounding of the hammer), al-murabba‘ (the quatrain), al-mijwiz (the couplet), naqlet al-carūs (the movement of the young bride), al-shūfā (related to the Shūf area in Lebanon), al-‘ādī, al-muwashshah, al-mukhammas al-mardūd,19 al-muhmal, and al-munaqqat (in which each letter is dotted with diacritics). These funūn, this time around, suggest not only rhyme patterns and verbal tricks, but also styles of oral delivery and singing, as is made quite clear by the etymology of the first four. Moreover, among the ṭarā‘iq of zajal, Nakhleh lists four kinds of ḥidā20 with various rhyme patterns: al-hawrabeh or al-hawbarah, a term derived from the refrain of a

18 Amīn Nakhleh calls it al-qarrādī, but he could be alone among zajal critics. Qarrādī and qirrādī are used interchangeably in Lebanon today.

19 This refers to one of the main rhyme schemes of qarrādī. Al-Mukhammas al-mardūd usually consists of four-line stanzas (8 hemistichs) that rhyme abababac, this last rhyme being used throughout the poem. At times a kharja is added to the four lines and the rhyme scheme changes to ababac, “d” being an independent rhyme in every one of the stanzas in the poem. See Nakhleh 1945:54. Note that Whaybeh (1952:73-74) gives an example of mardūd which differs significantly from that of Nakhleh. His example consists of a maṭla‘ and a dawr that rhyme as follows: maṭla‘, abab; dawr, ccdcdcb.

20 For a definition of hidā, see Nakhleh 1945:56-57.
hawrabeh poem (ibid.:57-58); al-zalāghīṭ or al-zaghālīd, a form specifically used in wedding celebrations; al-nadb (or elegiac verse); and jalwet al-ţarūs, a strophic composition sung or recited by women when welcoming a new bride.

In addition to these anwāc, funūn, and ţārā‘iq, Nakhleh (ibid.:60) lists what he terms ţarā‘iq ‘āmmīyah qadīma (or old vernacular methods): ‘atābā, mījanā, and abū al-zuluf, which he treats under bāb al-aghānī, or sung compositions, and in which, according to him, naẓm (ordered beat) rather than nagham (melody) plays the central role. Also included under Lebanese zajal is al-shrūqī (or al-shurūqī), known too as al-qāṣīd al-badawī (the bedouin qaṣīd), and al-mawwāl al-Baghdādī” (ibid.:65-66), two ţarā‘iq, one may surmise, which are still in vogue.

Reading Nakhleh’s introduction leaves one with the strong impression that Lebanese zajal is extremely rich in form and structure, but little is said of whether these ţarā‘iq, funūn, anwāc, and aqsām are further distinguished in terms of meter or whether meter plays any significant role at all. The arbitrary identification of only some genres with music and singing and the apparent exclusion of other genres, as we shall see, gives an imperfect picture of the reality of Lebanese zajal.

The space that Nakhleh allows for meter in his introduction is a mere paragraph stating categorically that

Lebanese vernacular poetry in its various ţarā‘iq is predicated upon an aural rhythm, not upon restricted feet. It [i.e. zajal] is in its rhythm (ważn), in the articulation of sound, the position of vowels (ḥarakāt), the structures of words and phrases (tarākīb al-alfāẓ), their pronunciation and writing [sic], dependent on melody (nagham). Some [my emphasis] of its melodies (or rhythms) may be related to the Khalilian meters. (ibid.:67-68)

Important and authoritative as this statement is, it tells us precious little about zajal meters and seems to contradict Nakhleh’s statements concerning the partial role of music. Moreover, we are not told which “melodies may be related to the Khalilian meters.” The rest of his account of meter consists simply of quoted statements by Lebanese critics taken at face value, without discussion.

Other critics are no less circumspect. In Muḥīṭ al-Muḥīṭ under the root ‘anaya, al-Bustānī states that zajal poets “depend mostly on rhyme such that they do not care for the appropriateness of language or meter” (1870:II, 1489). This opinion is shared by others. Dozy, for example, claims that zajal composition requires “unity of rhyme, not unity of meter, and that it [zajal] has a number of meters” (1967:I, 581). Zaydān (1957:IV, 206) sees a relationship between some meters of zajal and those of al-Khalīl, but others bear no relationship at all to the known meters in fuṣḥā. Zaydān agrees with al-Ḥūrānī (1906:XLII, 602-4) that the rajaz,
wāfir, and al-sarī are the only Khalilian meters found in Lebanese zajal. Al-Hūrānī, however, qualifies his statement by observing that these three meters undergo changes which are not permissible in fūshā poetry.

Influenced by al-Hūrānī, whom he cites, Zaydān then states more emphatically that “the vernacular meters which have no counterpart in fūshā meters are most probably taken from Syriac metrics” (ibid.:603). This view has several proponents such as ʿAbbūd (1968:103-12) and Frayḥah (1973:173), who see qarrādī, in particular, as a development from a Syriac seven-syllable meter used exclusively in church services by the early Maronite church fathers, first in Syriac, then in Karshūnī21 and then in Arabic.22 Voicing a similar opinion, ʿAwwād, in a frequently quoted essay entitled “al-Shīr al-ʿamm,” sees all of maʿannā as scanning according to the sarī, rajaz, and wāfir meters, excluding qarrādī, which he believes has unlimited meters that vary with the different forms of the genre.

The existence of two metrical systems in Lebanese zajal is suggested by Lecerf in his important “Littérature dialectale et renaissance arabe moderne” (1932:239), a lengthy historical bibliographical survey which also devotes several pages to the genres and meters of Lebanese zajal. Lecerf distinguishes two genres: “les genres chantés” and “les genres dits,” listing under the former the mawwāl, ʿatābā, mījanā, daʾūnā, and shūrūqī, and under the latter qaṣīd, maṭlaʿ (maʿannā), qarrādī, and jannāz (ibid.:234-37), with a short definition of each one of them.23 Only qarrādī is described metrically: “It is composed of seven long syllables in principle but may admit a supplementary short syllable which does not count in the measure” (1932:237). As for the metrical systems of zajal, Lecerf has the following to say, despite, as he puts it, “the difficulties of the subject” (239):

Le point le plus original de la prosodie libanaise est l’existence apparemment de deux systèmes aussi différents que le vers “mesuré” (mawzūn), dont le rythme repose sur la quantité des syllabes, et le vers à nombre fixe de syllabes. Nous avons dit que ce dernier rythme est celui du qarrādī. Le problème qui se pose est d’abord celui de la réalité de ce double système. En second lieu vient celui de son origine, et de la possibilité d’une influence de la poésie syriaque. Il est très remarquable en effet que le vers “nombré” (non-mesuré), de sept syllabes soit précisément celui des hymnes de saint

21 Karshūnī is the term used for Lebanese zajal compositions written in the Syriac script. See al-Nūr 1966:19-20.

22 Bishop Jibrāʾīl al-Qilāʾī is credited with the first serious zajal poems in the Lebanese dialect. See ʿAbbūd 1968:78-81.

23 The definitions leave out questions of meters and concentrate instead on rhyme schemes and a brief account of content.
Ephrem.

Lecerf identifies “Le vers mesuré” with ma‘annā, citing the aforementioned statements of al-Ḥūrānī, Zaydān, and ʿAwwād, among others, as clear indication of the workings of a quantitative system. He himself does not offer any examples, although he senses that “le principe paraît indiscutable” (237), and that despite the difficulty of scanning, as soon as the quantity of syllables enters the picture, one must end up with something resembling the metrics of al-Khalīl. The second system, “le vers à nombre fixe de syllabes,” is that of qarrādīt, which Lecerf insists is composed of seven syllables and resembles the verse used in the hymns of Saint Ephram or Ephraem. A question poses itself here: Is qarrādīt the only meter in this system? If it is, then it contradicts the available data on zajal where poems of four, five, six, seven, eight, or more syllables are found. If, on the other hand, qarrādīt is the general name of a syllabic system composed of more than one meter, then Lecerf does not mention these. It is remarkable that Lecerf cites an old qarrādiyya which according to his own reading consists of an unequal number of syllables, and yet he blames such inconsistency on uncertainty in the pronunciation of the lines. He also cites examples of daʿūnā to which other critics attribute a five-syllable scansion (for example, al-Nūr 1966:106), but he neither clearly treats it as part of his second system nor indicates whether it is quantitatively scanned. Interestingly enough, he does mention the possible role of accent in his citing of Dalmann, though he leaves his position unclear, and opts instead for number of syllables as the most important formal characteristic of qarrādīt.

There is no question that Lecerf has touched on the problems involved in scanning zajal, that he has been conscious of dialectal problems, and that he has observed the presence of two metrical systems, but, by and large, his study rests on the authority of preceding critics and on impressions rarely supported by metrical analysis. He is more concerned with the forms of zajal and its history, development, and content.

Two more critics, Whaybeh (see above, note 8) and al-Nūr (1966:106), contribute little substance to the preceding scholarship. Both repeat most of the arguments of the other critics, but both are perhaps more emphatic than most about the characteristics of zajal meters. Whaybeh categorically posits a simple syllabic basis for these meters, while al-Nūr opts for the quantitative system of fushā with slight modifications. Yet the qarrādīt presents the main problem for al-Nūr, and, as we have

---

25 The reference is to Dalmann 1901. See Lecerf 1932:240.
seen, to most of the critics before him. “Beaucoup d’éléments,” he writes (idem), “font croire que le qarrāḥī échappe au principe général des mètres quantitatifs adoptés en dialecte.” These “éléments” are not enumerated, but one main reason emerges from his ensuing argument. Because the syllabic meters lend themselves more than the quantitative meters to “coupures, omissions et additions,” and because all the syllables in qarrāḥī are long, it is most likely, he says, that we are dealing with a variety of al-khabab meter. Although he does admit the frequent presence of short syllables in qarrāḥī, he dismisses their importance because, as he puts it, they are necessarily elongated “pour être assimilées aux longues” (idem). While my research seems to support al-Nūr’s observation concerning the elongation of one or more short syllables, there is also the more important observation that qarrāḥī may contain more than seven syllables, be they long or short, and that such an occurrence will not affect the meter. The principle involved here concerns a pattern of stress which levels out the effect of uneven numbers of syllables, and a musical meter superimposed upon the poetic one. The possibility that al-khabab may be the meter of qarrāḥī notwithstanding, the reasons for that seem to be in the province of music, not metrics. I shall return to this important point later on.

It seems to me that most of these contradictory statements on zajal metrics result from the critics’ inability to admit stress and music into their studies. Without exception, all the genres of Lebanese zajal are either declaimed or sung, which clearly suggests to me that a consideration of poetic stress and musical meter is essential for the proper description of the formal metrical characteristics of these genres.26 In a completed, soon to be published manuscript on zajal metrics, I prepared close to sixty musical transcriptions of the known genres of Lebanese zajal,27 studied the relationship of poetic stress to musical accents, and arrived at a convincing proof of the quantitative tendency of some meters and the stress-syllabic basis of others. There is no room here to study these transcriptions, but some conclusions might be in order.

Careful analysis of the descriptive musical notations mentioned above showed that the poets of zajal render their lines in two musical styles, one characterized by a free rhythm, the other by a regularly rhythmmed underlay. They divide, in other words, along the two traditional styles of Arabic music: nathr al-naghamāt and nazm al-naghamāt. The

---

26 The importance of music in a sung poetic tradition can hardly be overemphasized. Without a full analysis of musical rhythm and poetic stress, metrical description remains tentative at best. For an excellent account of poetic stress in fushā poetry see Dīb 1974.

27 The musical transcriptions were prepared for this study by the two musicologists Lois Ibsen Fārūqī and Israel Katz.
former (literally, “musical prose”) refers to “a vocal or instrumental performance without regularly recurring rhythmic patterns.” The latter, or “ordering of tones,” defines a musical style based on a “traditional melody” and characterized by regular beats (Fārūqī 1981:233, 239).

The zajal meters used in the nathr style are mostly those of genres which require sophisticated arguments (as in verbal duels) or formal statements about social and political occasions, as well as formal nāṣibs (amatory preludes), panegyrics, satirical sketches, boasting, elegiac verse, and other sorts of occasional poems. In brief, longer poems with longer meters concerned with various degrees of iṣābat al-ma‘nā seem to be associated closely with the nathr style, and most of their meters bear close resemblance to those of fuṣḥā poetry, with frequent licenses for which al-Khalīl’s system cannot account. Informal, lighter, and shorter poems, such as jokes, some popular songs, counting rhymes (caddiyyāt), and verbal tricks, abound in the naẓm style, though neither style is differentiated exclusively in terms of genre.

As might be expected, stress in ma‘annā (and all genres rendered in the nathr style) is irregular, since the poet freely manipulates it to accord with semantic considerations. Of course it may, at times, coincide with an underlying metrical stress, but it is neither mechanical nor characterized by regularity. Its orientation is towards the message, because the content (i.e., poetry) is more important than the formal structure (i.e., music). Conversely, the meters rendered in naẓm, such as qarrādī, have a strict rhythmic pattern imposed by a musical meter. While singing qarrādī, the poet is in effect producing a neutral realization of the following trochaic pattern:

\[ \dot{\cdot} \quad \dot{\cdot} \quad \dot{\cdot} \quad \dot{\cdot} \]

The appearance of short syllables, as we shall see momentarily, is not infrequent in qarrādī, and they always count in the measure.

The scansion of the following stanza from a well-known Afrāmiyya, a modern version in both fuṣḥā and Syriac, illustrates the adaptation that the poetic meter goes through when made to fit the musical meter:

1) Yā šaliḥan abdā li-l-wujūd
\[ /\underline{\cdot} \_u/\underline{\cdot} \_u/\underline{\cdot} \_u/\underline{\cdot}/29 \]
(O virtuous one, who has made manifest to the world)

\[28\] The term “Afrāmiyyah” (pl. Afrāmiyyāt) refers to a Maronite homily or hymn composed after the poetic meter introduced in Syriac by the famous fourth-century St. Ephram (Ephraem).

\[29\] The symbol (\(\_\_\_\)) designates an extra-long syllable.
2) Min là shay’in kulla mawjūd
\[\text{From naught all that exists}\]

3) Wa aqāma li khidmati-hi junūd
\[\text{And put hosts at his service}\]

\[\text{Father and Son and Holy Spirit}\]

10) Hā dā lū hū shā ṭū
\[\text{One everlasting God}\]

The number of syllables differs from one hemistich to another. There are 9 in the first, 8 in the second, 11 in the third, and 8, 7, 9, 8, 11, 7, and 7 in the rest of them. Only three hemistichs—5, 9, and 10—have the number and quantity of syllables (7 long) that characterize modern qarrādī. The stress pattern makes it clear that stresses fall on long syllables (\_',) on the first of two short syllables (u u), the second of two shorts (u u), or on a short syllable followed by a long (u) as in hemistich number 8. When the lines are sung, the musical rhythm and time duration are the same in all the hemistichs. The division into feet is determined by stress boundary, in all cases molding poetic quantity to obtain equal beat intervals. We could speak of qarrādī, therefore, as a stress-based meter with uniform quantity.

In order to prove that syllable number is not a formal characteristic.
of qarrādī, I made spectrograms of this Afrāmiyyah, using a sona-graph, 7029A, which was run at a 40- to 4000-hertz scale. It recorded slightly under five seconds of speech at one time. A calibration tone which had nominally 200-millisecond duration and which measured a 1/2 inch on the spectrogram was used. After deciding where each hemistich began (the onset of the nasal resonance interval) and where its closure was, every one of the hemistichs turned out to have the exact duration of 3.2 seconds despite the significant difference in the number of syllables.

The last two hemistichs, which are transliterations of a Syriac line, are like modern qarrādī characterized by much more syllabic stability. This is so because Syriac exhibits the same erosion of inflections and internal voweling as does the Lebanese dialect. One conclusion is clear. The trend in qarrādī has been towards more syllabic uniformity as its modern manifestations clearly suggest. The early translations of the Afrāmiyyāt—with their mixture of fūṣḥā and dialect—have, in the course of the development of the genre, given way to pure dialect and consequently to poetic features influenced by the morphology and the syntax of the dialect. Again there is no room here to discuss the metrical characteristics of the other genres, but one point is manifest: musical meter and musical accent are essential for the proper description of zajal metrics.

*****

There is a great deal of conjecture over the history of Arabic vernacular poetry in general, and Lebanese zajal in particular. Most critics concur that the first important manifestations of vernacular poetry were in Arab Spain in the late twelfth century (cf. Khaldūn 1958:454-80 and Nakhleh 1945:16-32), though a number of historians, philologists, and critics trace the beginnings of this poetry to pre-Islamic and early Islamic times (see Nakhleh 1945:16-26). In the Lebanese context, there seems to be a general consensus that the early zajal prototypes first appeared in the writings of the Maronite church fathers, who were directly influenced by Syriac liturgical material (see, for example, Nakhleh 1945:37-44 and ʿAbbūd 1968:78-86). The early church fathers, who were versed in Aramaic, deemed it necessary to translate Syriac hymns into the dialect of the faithful in Lebanon, retaining as they did many of the original Syriac metrical features of these hymns (ʿAbbūd 1968:77-86). There is ample evidence to suggest that this reconstruction is partly true, since the absolute majority of these hymns are in the qarrādī meter which has a clear musical basis. It is equally true, however, that the secular poets (and indeed some of the church fathers) had, in addition to using the qarrādī meter, produced a large number of poems in quantitatively based meters, quite similar to
the meters of *fuṣḥā*. In my opinion, this suggests quite plausibly that the quantitative metrical compositions had *fuṣḥā* metrics as their inspiration. Formal considerations, such as rhyme schemes, nomenclature, and the use of homonyms in *‘atābā* and *mījanā*30 point to direct influence from the Arabic *fuṣḥā* tradition. How far back all of this goes is not certain. What is clear, however, is that the first recorded *zajal* poem dates back to 1289, the year of the destruction of Tripoli, Lebanon, by the Mamluks.31 After that date, most of the manuscripts record the hymns of the early Maronite fathers from the early part of the fifteenth century until late in the seventeenth century. From then on, Lebanese *zajal* became part of Lebanese folk culture. By the early part of the twentieth century its idiom changed slowly from a mixture of dialect and *fuṣḥā* to pure dialect.32

It is in the Lebanese mountains that the major developments in *zajal* have taken place. Besides its aesthetic value, *zajal* has filled an important entertainment vacuum in villages, where in the evenings every house becomes a meeting place for the hard-working peasants, their families, and friends (*ʿAwwād 1930:501-4*). During the winter especially, people gather around a brazier placed in the center of the living room, drinking coffee and eating dried fruits. The evening starts with well-known songs in the vernacular in which everyone participates. Part of the time is spent listening to a raconteur reciting and singing parts of a story from Lebanese or Arab folklore. The audience may then assume the various roles of the story’s characters, adding new anecdotes and embellishments. On more formal occasions, such as weddings, births, christenings, and saints’ holidays, the meetings take place in the homes of the rich, the village club, or the churchyard. One or more *qawwāls* are invited to the celebration, which soon becomes a *muḥāwarah* (disputation, dialogue, argumentation) in verse between the *qawwāls* themselves or between them and some of the guests. The host then rewards the winners with money or presents (*ibid.*:501).

The most fertile ground for the verbal duel is the occasion of a saint’s day. The *qawwāls* and *zajjāls* travel from village to village, seeking celebrations of these holidays, accompanied by a group of their supporters called *al-raddādah* or the chorus. Besides giving the poet the support and encouragement he needs while dueling, the chorus fulfills the important

---

31 The poem is introduced and printed in its entirety in Whaybeh 1952:131-32.

32 For a complete account of the successful attempts by Lebanese critics and poets to rid the Lebanese *zajal* dialect of *fuṣḥā* words and desinential inflections, see al-Nūr 1966:81-87.
function of repeating particular lines in the duel, first in order to remind the poet of the musical meter from which he might have strayed and secondly to give the poet time to improvise the lines that follow.

If two qawwāls are present, the audience divides into two groups, each group supporting one of them. The older qawwāl starts first by lifting the daff (tambourine) and asking for al-dastūr (the permission of the audience). He starts by singing on a topic of his own choice which he addresses to the other qawwāl. He may start with a riddle, which he dares his opponent to solve in verse; he may challenge him to debate a political or social issue, or may start with muṭāyabah (banter, joke, teasing or friendly remark). The opponent must respond in kind, often with mask al-ḥarf or sticking to the same meter and the same rhyme. If he is unable to solve the riddle, or emulate the meter and the rhyme, he must apologize in verse or else lose the contest. Neither poet is permitted to plagiarize verses from the tradition or repeat any verses that he might have composed in previous contests; all lines should be improvised on the spot. In most cases a judge who is a qawwāl himself or is versed in zajal is chosen by the audience to evaluate the duelers and announce the winner (ibid.:502).

Early in this century the verbal duel witnessed new and exciting developments. Eventually several poets pooled their resources and traveled around the countryside publicizing their new group or jawqa. When invited to a social function, they would sit around a table and praise their host, with one daff changing hands as each poet recited his praise. They would then take up a particular subject (often political or social) and duel among themselves. By the the late 1930’s and early 1940’s, the jawqa became more defined; it evolved into an institution, four poets in all. Two of them would band together against the other two and duel over an opposition (day and night, war and peace, freedom and imprisonment, etc.) which either they or someone from the audience would suggest. The raddādah would sit behind the jawqa, waiting for their cues to sing along with each of the duelers.

Recently a further development has taken place. The poets of one jawqa now duel with the poets of another—four against four, four verbal duels in all—and the reputation of each jawqa depends on the performance of its members. A typical mubārāt (or contest) attracts ten to twenty thousand people. In these contests the duelers follow a prescribed order of improvisation, employing several of the many zajal genres that are well-known to the audience. The opening of the duel is a qaṣīd (or ode) which the leaders of the two groups recite, one at a time. Part of the qaṣīd is a poem in praise of the country, the host, and the audience. Having curried favor with their audience, they then boast about the members of their group and dare their opponents into a duel. At this point the audience is asked to suggest a topic for the duel, which is usually in the form of an
opposition. (At times, the topic is given in advance to the groups by the duel’s
organizers.) All together four topics (oppositions) are then treated by eight poets,
four from each group. This part of the duel employs ma‘annā, a different meter
from that of the opening qaṣīd, and while the raddādah are not involved during the
singing of the opening qaṣīd, they play an important role in the duel proper. At the
end of every ma‘annā stanza, the raddādah come in, pick up the last hemistich, and
sing it twice or more, the frequency of repetition being dependent on whether or
not the poet is ready to answer his opponent. If the poet takes too long to prepare
his answer, the audience will signal their displeasure by hissing or shouting. Since
audience reaction is important to the progress of the whole duel, the poets may
change the meter of their duels whenever they sense the slightest boredom. When
this happens, the meter used is that of garrādt, which, as we have seen above, is
a light musical meter characterized by strict rhythm. Also out of deference for the
feeling of the audience, the poets may use formulas which the listeners know well,
thereby inviting their direct participation. After all the poets are given a chance to
duel, the leaders of the groups recite a love or patriotic poem, each in the meter of
the opening qaṣīd. The contest ends after three or four hours, and both groups are
declared winners by their supporters.

I have been describing the kind of highly stylized duel known to the
practitioners of zajal as jafā (harshness, enmity, aversion), which is predicated
upon highlighting one’s own logic and belittling that of one’s opponent. Another
kind of duel has little to do with argumentation and disputation; instead the poets
display their knowledge of verbal tricks, difficult rhymes, and historical and literary
allusions. In this form of contest the poets demonstrate their ability to produce lines
(usually in garrādt) in which none or all of the letters appear with diacritics, or
lines in which the first word of each line follows the order of the Arabic alphabet,
or other such verbal tricks, of which one source alone records more than fifty (al-
Wādī n.d.:V, 15-25). As might be expected, the norm here is memorization rather
than improvisation. Finally, another favorite duel is the ‘atābā duel, which involves
the use of homonyms and a knowledge of tatīlt.33 This form is concerned less
with a uniform subject than with the poet’s ability to draw upon his knowledge of
vocabulary.

33 Tatīlt derives from the second form of the verb thallatha (to make “threesomes”). In
‘atābā and mtījānā, the term refers to the use of three homonyms in the first three hemistichs of the
‘atābā or mtījānā verse. It is worth noting that this verbal trick most probably developed from an old
genre of fushā poetry known as the muthallathāt. The most famous of muthallathāt is Muthallathāt
Qurāb, published and edited by Edvardus Vilmar in 1856. This is a critical edition in Latin which
discusses, among other things, the meter and form of the muthallathāt. The end-rhyme in the last
hemistich of each bayt is the same as the most popular rhyme used in ‘atābā.
Each bayt of ʿatābā is composed of four hemistichs, the first three of which end with the same word, which itself yields a different contextual meaning from the other two. The fourth hemistich then ends with a word rhyming with “ār” or “āb” (see Nakhleh 1945:60-62).

The five stanzas that follow are from the famous zajal contest which took place in 1971 in Dayr al-Qal'ā, Bayt Miřī, Lebanon between the jawqa of Joseph al-Hāshim (pen name, Zaghlūl al-Damūr) and the jawqa of Khalīl Rūkuz, headed by the famous poet, Mūsā Zghayb. The number of people who attended the contest was estimated at more than thirty thousand (Ziadeh n.d.:8). The first duel on “innocence and guilt” was between Edward Ḥarb from Zaghlūl’s group and Buṭrus Dīb from Mūsā Zghayb’s group; thus the allusion in the first stanza below to the preceding duel.

Jiryis Bustānī:

Rest at ease; we are done with (the subject of) the innocent and the guilty.
Now the time has come for important discourse.
O Bayt Miřī, get drunk with my songs;
You are my ‘Anjar after the days of (Prince) Fakhr al-Dīn.36
Zaghlūl, if you want to ransom the souls of your friends,
Do not send to my pulpit an untried youth.
In the former contest I did not mince my words,
And I showed great compassion to all those who dared to sing with me.
Today (however) I come charging on my Abjar37
To attack and scatter around (people’s) heads
So that two thousand years hence
History will remember the battle of Bayt Miřī.

Ṭalīc Hamdān:

Zaghlūl, rest at ease. The canary sings.

34 The reference is to the first five stanzas of a famous verbal duel between Jiryis al-Bustānī and Ṭalīc Hamdān.
35 ʿAnjar is a famous village in eastern Lebanon where a major battle between Prince Fakhr al-Dīn and the Ottoman Turks took place.
36 A seventeenth-century Lebanese prince who fought off Ottoman occupation of Lebanon.
37 The famous horse of the legendary pre-Islamic folk-hero cAntar Ibīn Shaddād.
You know that Ţâlîc Hamdân is the conqueror of enemies.
And Jiryis, since you have started with the severing of heads,
Why has not your sword discovered your head yet?
You are in the habit of attacking me with the sword of death
And I am in the habit of extinguishing and finishing you from the start.
And today in this monastery\(^{38}\) which is filled with guiding light
I shall strangle you and make you a mere echo.
And tomorrow after you are gone and after time grows old,
History will say a few words with utmost care:
Ţâlîc Hamdân destroyed you in every battle
And the battle of Bayt Mirf was no exception.

Jiryis Bustânî:

What did the son of Hamdân say? Listen ye world:
He said he would destroy me and he bragged about his muscles.
Does he not know [addressing Ţâlîc] if I tell the sun not to rise,
It will obey, and it will kneel if I tell it to kneel?
And does he not know that the pulpit is the product of my craft?
And that the rainbow is a little ring around my finger?
And tomorrow if history becomes aware of this contest
And registers in its pages the names of the great (poets),
It will mention my heroic deeds and the excellence of my quarry
(where I hone my rhymes);
It will mention the echoes of my cannonballs;
It will mention the monastery that I overwhelmed with my presence;
It will mention my vitality, my good heart, and my great achievements;
And from another angle it will mention you briefly
Because it must mention those who sang with me.

Ţâlîc Hamdân:

How blasphemous is history which from a great distance
Feels constrained to mention the likes of you:
But let us suppose that history did not mention me a lot.
Let me tell you why, O conceited one:
Paradise, which is full of perfume and flowers and love,
Fills the breeze with perfume as the breeze passes by it (briefly).
That is why your history (when it rumbles)
Passes briefly by me as you have suggested.
And so do you, great men, rainstorms,
The sea, which has drunk from my thoughts,
The rainbow, tenderness, the night of love,
And all the poets who have attained the highest status,
All pass briefly by my pulpit
To be blessed by my poetry and to vanish quickly.

\(^{38}\) The reference is to the famous monastery in Dayr al-Quṣʿa in Bayt Mirf, Lebanon.
Jiryis Bustānī:

You have taxed the patience of God, you son of water and clay.  
Your years have not been blessed by your generosity (?).  
But in order not to deceive our audience  
I shall expose you before those who do not know you.  
You are a piece of paper among neglected papers  
And by sheer luck it ended up in the company of the great,  
But it was like a beggar on the roads of history  
Seeking alms from all those who pass by him (briefly).  
‘Antar39 passed by and bequeathed brow-raising greatness  
And Gibrān40 wrote lines with the ink of the inspired.  
And Qays41 left upon it a breath of love  
And the monks crowned it with the halo of faith.  
Yet had I not signed it with my poetry  
It (you) would not have become a page pleasing to anybody.

What we have here is a perfect example of strong reading, a strategy whose main communicative intent seems to be to put one’s opponent down or to test his ability to maintain presence of mind in interaction. One important feature is to constantly try to push one’s opponent into a defensive role, by overplaying the implications of his argument. The translation above is deficient in that it is unable to capture important linguistic and paralinguistic elements such as changes in pitch, stress, and syntax which often provide the signals of contest. Also the translation necessarily leaves out all those emotive meanings that are comprehensible only to the particular audience, as well as audience reaction itself, which often consists of loud approval or disapproval of the particular poet’s arguments.

Still, however, the lines of argument are perfectly clear. The main issue is how history is going to remember the two duelers. Quality rather than quantity (number of pages) becomes the fine distinction. Soon, however, the argument comes to a draw and the subject changes from “history book” to the “paper” that one of the duelers must sign if his opponent’s name will ever be added to the names of the great poets. In the rest of the duel, “paper” reverts to a “death notice” and to a whole series of ratiocinations which stretch the subject to its limits, while still remaining within the realm of general history.

39 ‘Antar Ibn Shaddād is a famous pre-Islamic poet known both for his poetry and legendary valor in battle.  
40 The famous author of *The Prophet* and many other writings in English and Arabic.  
41 The reference is to Majnūn Laylā, Qays Ibn al-Mulawwah, an early Islamic Arab poet.
Some of the strategies used in these excerpts are typical of Lebanese verbal duels in general. The main issue is often avoided and side issues are highlighted instead, often over the protestations of the audience. The reason, I suppose, is directly related to the constraints of improvisation, which require, among other things, speed and changes in speech rhythms from natural ones to ones conforming to the demands of the formula. In addition to the main argument, duelers adopt other strategies. A favorite approach is to say that the opponent’s argument is old and that the intelligent audience will not buy it. Here the appeal to the audience’s wisdom earns the dueler psychological support. Another approach is to put words into the opponent’s mouth and then attack these words. Still another strategy would be for one of the duelers to charge his opponent with evading the whole issue, or to berate him for having totally missed the point. Finally, one of the poets may repeat his adversary’s weak argument in order to expose and explode it.

In all these strategies, the poets use a large number of syntactic (as opposed to verbal) formulas. The style is often additive, exhibiting similar syntactic structures (in the form of illustrations) which are piled up to give the dueler the necessary time to tie up the loose ends of his argument. A popular syntactic structure is the use of “if clauses,” often five or six of them before the poet finally comes up with the “answer” to the conditions. All this leads to the “clincher,” which is often in the last two hemistichs of the response. In reality, however, the poets figure out the last two hemistichs (the clincher) first, constructing the argument in reverse, as it were, starting with formulas which have little to do with the argument and then slowly leading back to the clincher. A poet may, for example, start by addressing the stars of heaven, bidding them to listen to his opponent’s lies, then brag about his own logic or praise the audience, and all this before he finally comes back to the answer proper.

Rhyme plays an integral role in the duelers’ improvisations. Their training involves a knowledge not only of the semantic meaning of words, but most importantly, perhaps, of their morpho-phonological characteristics. They classify words in terms of their sound patterns with particular rhyming possibilities, groupings that can be recalled quickly and employed in particular arguments. Even though the morphology of Arabic is especially conducive to rhyming, the rhymes are not infinite, and the accomplished poet is constantly aware of which rhymes are particularly useful in particular arguments. In a taped interview42 Zaghlūl al-Dāmūr, one of Lebanon’s greatest zajal poets, claims that the rhyme word of the

---
42 Recorded in 1983 in Zaghlūl’s house, Anteliās, Lebanon. In addition to singing all the known genres of Lebanese zajal, Zaghlūl discussed the metrics of zajal and the strategies used in improvisation. All references to Zaghlūl’s observations are to this interview.
first line of a duel is enough to give him an idea about his opponent’s line of thought. When asked what he would do if his anticipations were wrong, he said he knew enough strategies to deal with such an eventuality. One such approach, he said, was to evade the question and change the focus of the argument.

I am convinced that all the strategies I have been discussing make improvisation a less formidable task than critics who have not mastered the art of dueling are willing to admit. I am equally convinced that the verbal duel proper is totally improvised on the spot. As Zaghlūl himself put it, no poet can get away with memorizing lines or repeating well-known lines before members of a critical audience who have taped and memorized every verbal duel that has taken place in the past twenty years. He added that “in a verbal duel no poet knows where the argument is going to lead, and memorization will be more difficult to control than actual improvisation.” When probed further, Zaghlūl admitted that most poets extemporize rather than improvise their qaṣīds, but not the verbal duels themselves. I am using extemporization here to describe the kind of silent preparation immediately before the actual recitation, or as Zaghlūl himself describes it, “notes, main ideas, phrases that an accomplished lecturer uses to treat a topic, with the exception that with us [the poets of zajal], these notes and ideas are not written on cards.”

While the question of improvisation in the fuṣḥā tradition is fraught with controversy (cf. Zwettler 1978 and Monroe 1972), there is little doubt that the phenomenon of verbal dueling in Arabic literary history is as old as the first recorded poems in pre-Islamic times. From the mu‘āradah between the pre-Islamic poets Imru’ al-Qays and ʿAlqama, to the mufākharah and munāfarah among the Arab tribes and between the Arabs and the Persians, to the mu‘āzama of al-Khansa’ and the murājazah between al-Mughīra ibn al-Akhnas and ʿAbd Allāh Ibn

---

43 Al-qaṣīdah al-mu‘āridah is a poem emulating the meter, the rhyme, and the aesthetic qualities of another poem. See al-Shāyib 1966:6-8.

44 Al-mufākharah derives from fakhr or boasting. Al-munāfarah is also concerned with boasting but differs from al-mufākharah in that judging by a third party is not necessary. In both poems the poets try to out-boast each other by referring to their individual qualities or the attributes of their tribes.

45 Al-mu‘āzama is a poem in which the poet brags about his or her ability to bear grief, especially in the case of the death of a relative or an important member of the tribe.

46 Al-murājazah shares most of the characteristics of the aforementioned genres but uses the rajaz meter.
Budayl, and finally to *al-munāqaḍah* among the major Umayyad poets, verbal dueling in *fuṣḥā* attains a high level of development. But to say this is not to imply necessarily that Lebanese verbal dueling is directly influenced by the *fuṣḥā* antecedents. Notwithstanding some similarities in general strategy, the idiom, purpose, and content of verbal duels are significantly different in the two traditions. Each tradition, it seems to me, adapted itself to the political and social milieu specific to its own time. Certainly the difference in the poets’ roles (the champions in words of their tribes in the *fuṣḥā* tradition, and the verbal virtuosos par excellence in the Lebanese tradition) had an important impact on the form and content of the duels.

As intimated above, most of the other Arab countries, notably Saudi Arabia, Yemen, Iraq, Jordan, and Egypt, have similar living traditions of vernacular poetry, though none has attained the renown and richness of Lebanese *zajal*. Some of the genres and meters are similar enough to attract scholarly interest in comparative studies. As the political, social, and demographic scenes in the Arab world change, critical analyses of Arabic vernacular poetry assume particular urgency.
